

CRX Series

CRX10/13

AC24V Standing type reach truck

CRX14/15/18/20/25

AC48V Standing type reach truck

The new CRX, upgraded by a 100% AC system, will provide you with numerous benefits over any other truck, by its increased performance and decreased ownership cost. Superior ergonomic design, operator comfort, safety and outstanding truck performance are backed by the oldest name in the forklift business

- ❶ Battery discharge indicator
- ❷ Date and time display
- ❸ Hour meter and speed display
- ❹ Message area and truck direction indicator
- ❺ Mode select and functional switch
- ❻ Parking brake reminder
- ❼ Seat belt alert
- ❽ Fault alert

Performance

The CRX's traction and pump motors are all AC, which enables the CRX to perform any task under any condition by its superior power. Matched with high performance AC motors, the standard Zapi traction and pump controls realize the operator's precise and dynamic demands on the CRX in the most efficient way.

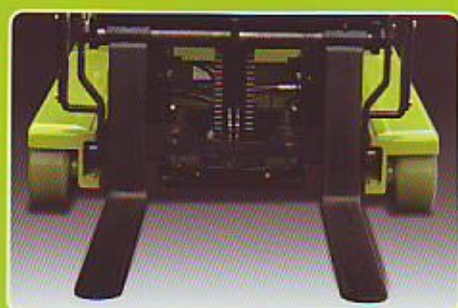

Minimized cost

The CRX guarantees the lowest ownership cost of its class. Frequent brush and contactor tip replacement is a thing of the past with the CRX. Motors are protected from any contamination, dust and moisture by a fully enclosed metal cover and controls are highly protected by the robust frame structure. All motors and controls are equipped with advanced thermal protection devices which monitor the temperature and reduce system current as to not approach their thermal limits. This greatly reduces the likelihood of any core component's burnout. All main components in CRX are industry proven, to ensure the highest reliability and less down time, to minimize invisible losses.

Convenience

A color TFT LCD display shows the truck's status in real time and for easy maintenance, stores error codes if anything should go wrong with the CRX. 3 conveniently selectable truck modes (Power, Normal, Economy) and nearly 80 adjustable parameters can be set, not by an expensive and complicated handset or laptop, but by this smart display. Plus there is a password function to optimize the truck for any workshop condition.

Electric Forklifts

Comfort operation

Specially designed low noise pump, spacious operator's compartment, large brake pedal, cushioned floor mat, ergonomically located levers and steering wheel, and adjustable hip-rest, were taken into consideration to maximize the pleasure of operation. Hydraulic cushioning valves on the mast also provide silent staging of the forks to reduce shock during both lifting and lowering.

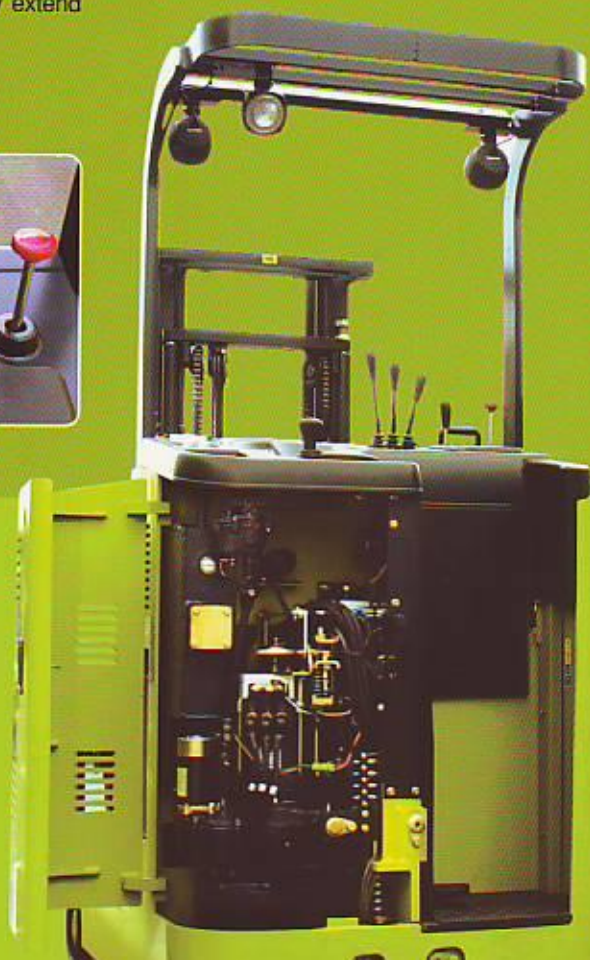

Robust mast and carriage

Sealed and canted rollers minimize deflection and free-play in both the mast and the carriage. Six carriage load rollers spread out the load, significantly improving roller life. Side thrust rollers help prevent racking during off-center loading and massive high-strength steel fork bars significantly extend component's life.

Serviceability

All major components like motors and powertrain are accessible by a one-touch-open side door. Controls are accessible by detaching the front cover easily by hand.

Various optional items are available

- Camera on carriage and monitor
- Digital fork height indicator
- Digital load weight indicator
- Fork leveler
- Cold storage

High performance & efficiency

- High performance AC Traction and pump motor
- ZAPI Traction pump control

Cost saving

- No brush and contactor tip to replace
- Reliable components resulting in less down time

Comfort

- Large operator room
- Low noise pump
- Adjustable hip-rest
- Hyd. cushioning valve on the mast

Convenience

- High visibility (upright/overhead guard)
- Easy access to main components for maintenance
- Programmable large color LCD display
- Various options

Durability

- Durable structure
- Robust mast and carriage
